Pediatric Infusion Therapy

Infusion Therapy is a safe alternative for children who do not need around the clock monitoring by the nursing staff.

While many children receive infusion therapy in the hospital or outpatient setting, the focus has been geared toward home infusions, primarily due to an attempt to reduce health care costs for consumers, federal agencies, and third party health insurance companies.

At Home Healthcare offers an IV therapy program, with a goal to educate and monitor. Our services work alongside a local pharmacy to provide clinical services in the home. Our team of specially trained Registered Nurses combines their assessment skills, technical expertise and community health experience to treat children with cancer, nutritional defects, autoimmune disorders, leukemia, heart disease, hemophilia and other health problems.

ADVANTAGES OF HOME INFUSION THERAPY:

- Offers the patient/family the freedom to recover in the comfort of their own homes
- Offers the patient/family the opportunity to participate in their plan of care
- Safe, quality, cost effective health care services are provided
- Convenience of not having to go to an outpatient infusion center for treatment

INFUSION SERVICES INCLUDE BUT ARE NOT LIMITED TO:
Care Giver Education in a real-time setting, real-time questions answered
Hydration Therapy
Antibiotic Therapy and Therapeutic Drug Monitoring
Anti-Coagulation therapy
IVIG Therapy
Inotropic Therapy
Central Line Maintenance
Steroid Therapy
Total Parenteral Nutrition

Chemotherapy is Available in the Pediatric Texarkana Market Only
At Home Healthcare is committed to assisting children and their families to receive necessary care in the familiar setting of the child’s home. Care is tailored for each patient using a team of Registered Nurses, Licensed Vocational Nurses, therapists, and attendants who have chosen pediatrics as their specialty. At Home Healthcare serves over 50 counties with 11 offices throughout North and East Texas.
