Thank you...

for growing in knowledge with us!

Seminar Summary

You will learn about Selective Percutaneous Myofascial Lengthening (SPML) and how it compares to other interventions. You will learn when and why to refer for SPML and the post-surgical therapy protocol. You will learn about the surgical process and how it affects the ankle, knee, and hip. You will learn about bicipital surgery and wrist tendon transfers.

Meet your Instructors

Dr. David Yngve is Chief, Division of Pediatric Orthopedics and Scoliosis, Professor of Orthopedic Surgery and Rehabilitation, Professor of Pediatrics at University of Texas Medical Branch in Galveston. He has done research in the area of Percutaneous release of contractures in Cerebral Palsy. He performs surgery and instructs residents on proper surgical techniques.

Tina Mootz, DPT, PCS, is a seasoned therapist with many years experience working with children who have received benefit from SPML. She is a mentor to many therapists and loves to share her knowledge with other therapists.
