

At Home Healthcare

OB/GYN

Do you have patients who could benefit from home health?

At Home Healthcare Skilled Nurses can monitor, teach and train patients and/or caregivers while your patients are on our service. Following are some medical conditions that we can assist with care for patients:

■ Our **Wound Care** program can assist your patients who have had:

- C-Sections
- Hysterectomies
- Dehiscence of incision

We'll monitor their wound in the comfort of their home and aid in reducing the chances of infection. We can also provide evidenced-based wound treatments including Negative Pressure Wound Therapy and Vacuum Assisted Closure (VAC) in the patient's home.

■ Our Nurses can see your prescribed bed-rest patients after surgical procedures or during pregnancy and help them avoid re-hospitalization. Our **Home Support Services** program can help with shopping, meal preparation, laundry, light housekeeping, and many other daily chores.

■ Your patients with gestational diabetes or newly diagnosed diabetes can receive:

- Frequent lab checks in their home
- Visits by our **Registered Nurses** to teach and train on the glucometer plus get help with meal planning

■ If you have patients with preeclampsia, toxemia or high-risk pregnancies, our nurses can:

- Assist with symptomatic control i.e. monitor blood pressure, do lab work, assess for edema, et al.
- Also help in detecting post-partum symptoms after delivery
- Consult with your patients with pregnancy- induced hypertension providing information on planning and preparing low-sodium diets.
